

Career Genie

From “I want this job” to “I’m ready for the interview.”

AI-POWERED CAREER APPLICATION & INTERVIEW PREPARATION ASSISTANT

IIT Patna · Batch 5 · Capstone Project | Week 1 Assignment — Capstone Concept One-Pager |

THE VISION — Career Genie connects the complete job-seeker journey — job analysis, role-specific CV improvement, skill-gap discovery, application tracking and interview preparation — in one continuous, role-specific workflow app.

PROBLEM

Professionals reuse a generic CV across different jobs, even though employers screen for role-specific keywords. Candidates can't tell why a CV doesn't match, which skills are missing, which version was sent, or how to prepare for the interview — tailoring, tracking, upskilling and interview prep stay fragmented across separate tools.

PROPOSED SOLUTION

Career Genie analyses a target job (description or URL) against the candidate's CV, highlights strengths and gaps, and recommends explainable edits the candidate accepts or rejects before exporting a tailored CV. The same job–CV pairing then generates interview questions, runs a text-based mock interview, and gives AI feedback — context is never re-entered.

Not just a CV generator or a generic interview chatbot. Career Genie keeps one shared context across job, CV, skills and interview prep, with explainable, candidate-controlled recommendations.

CORE FEATURES — MVP

01 Job Specification (JD) Input

Paste a job description or URL

02 CV Upload & Parsing

Extract experience, skills & achievements

03 Job–CV Match Analysis

Gaps, keywords & match score

04 Explainable Recommendations

Targeted visual edits with reasoning

05 Accept / Reject Changes

Candidate controls every edit

06 Tailored CV Export

Per application, or send by mail app

07 Application Tracker

Job, employer, date & CV version

08 Interview Intelligence

Role-specific mock interview + feedback

HOW THIS DIFFERS FROM A TYPICAL CV / CHATBOT TOOL

TYPICAL CV / CHATBOT TOOL

Generates or edits a CV
Provides generic suggestions
Treats each interaction separately

VS

CAREER GENIE APP

Analyses the CV against a specific job, suggest edits and store the version
Job-specific, explainable recommendations, later reuse specific context for interview prep
Maintains shared job–CV–skills–interview context in one single app to track end-to-end journey

TARGET USERS

Professionals seeking a new job, promotion or career pivot — especially experienced IT/tech, finance, consulting and management/executive candidates.

TOOLS, TECHNOLOGY & DATA

OpenAI/Claude for analysis & interview intelligence · **Supabase** for backend database, **Google Cloud** for storage · **Lovable/ Replit /Next.js** for frontend MVP · **PDF/DOCX OCR**, parsing & visual CV editor, **N8N** for automation.

EXPECTED OUTCOME

A **working prototype** helping **candidates target the right roles**, submit better-matched CVs, close skill gaps, and practise for likely interviews.

Target Job → CV Analysis → Skill Gaps → CV Improvement → Tailored CV → Track Applied CV
→ Interview Prep → Mock Interview → Feedback

Roadmap (post-capstone): voice-based mock interviews · record real live interviews using AI assistant, personalised upskilling recommendations · automated job-URL application integration · recruiter-facing discovery view.

PREPARE BETTER. PROVE YOUR SKILLS. GET DISCOVERED.
